

Background

EDS is a suite of products and services offered by the Defense Information Systems Agency (DISA) and the Defense Manpower Data Center (DMDC) that provides secure DoD enterprise identity and contact attributes. It is comprised of enterprise provisioning, directory, and synchronization services, and enterprise white pages.

Why DOD Enterprise White Pages?

With increased people mobility and geographically-dispersed missions across the Department of Defense (DoD) enterprise, the need to collaborate with one another is becoming more important every day. With this in mind, DoD Enterprise White Pages is an enterprise service that provides a simple way for users to look up contact information for all DoD Common Access Card (CAC) holders and SIPRNET Hard Tokens.

Try it today at NIPRNET: <https://www.whitepages.mil>
SIPRNET: <https://www.whitepages.smil.mil>

Service Overview

- Provides browser-based access to authoritative DoD enterprise identity and contact information maintained by the Defense Manpower Data Center (DMDC) in the Person Data Repository (PDR) and certificate info from DISA's Global Directory Service (GDS)
- Accessible by any DoD user with a valid Common Access Card (CAC) or External Certification Authority (ECA) certificate via the internet or NIPRNet
- Persona-based approach: Users may perform searches on attributes specific to an individual's role, such as personnel type, rank, and duty organization, in addition to more traditional attributes, such as name and email address

Service Features

Basic Search

- Search by Name (First, Middle Initial, and Last) and Personnel type

Advanced Search

- Search by Email Address, Duty Organization, and Rank in addition to all of the basic search fields

Persona Based Results

- One listing displayed for each persona matching the search parameters

Contact Card

- A persona-based, tab delineated, user interface displaying an individual's contact information

Personalized Links

- Share a link to your personal contact card

Certificate Download

- Download an individual's Public Key Infrastructure (PKI) certificate to your client to enable encrypted email communications

vCard Download

- Download an individual's electronic business card and store it locally
